

From the world's leading data management organisation, comes the world's most powerful degausser.

Ontrack Eraser Degausser 3.0

Kroll Ontrack has launched the Degausser 3.0 with increased magnetic fields. This new, even more powerful device is the solution of choice if you are serious about security and permanently erasing your end of life data from hard drives and tapes.

When software solutions are not powerful enough, the Degausser 3.0 is the most cost-effective solution for the erasure of defective storage media and end-of-life data.

Certified for Excellence

The Ontrack Eraser Degausser uses technology that adheres to the most stringent of international standards, including those used by the UK and US military authorities. Additionally, it is approved by The Norwegian National Security Authority (NSM), a cross-sectoral professional and supervisory authority within the protective security services of Norway. The NSM has accredi-

ted the Ontrack Eraser Degausser capabilities to a secure erasing capability level of "Secret".

Ontrack Eraser Degausser is a new product in Kroll Ontrack's data erasure product portfolio and will be sold in Kroll Ontrack's 30 operating countries.

Public sector and large corporations

Demand is derived from mainly from public sector, and large corporations with a strict security strategy that includes data erasure of all storage media, including non-working media which often are stored in large basement storage rooms. Many of these organisations also erase their in-warranty defective media before they are sent to the manufacturer.

Ontrack Eraser Degausser erases 100% of all hard disks, tapes, diskettes and other magnetic media with 3,5" form factor. New generation hard disks and tape tech-

nology with pre-fabricated servo data cannot be re-used. All other media can be re-used.

Working hard disks may be erased by professional data erasure software, like Ontrack Eraser. When the disk is erased by this software the disk can be re-used.

Features:

- Logic controlled, no micro processor
- Remote control
- Diagnosis mode
- Effect: 1kW (110-220 V, 50-60 Hz)
- No batteries
- Display:
 - Gauss/magnetic field in center- and in peak value
 - Volt
