Authorisation of Ibas Expert Eraser and Ibas Degausser

The Swedish Armed Forces have authorised Ibas ExpertEraser and Ibas Degausser for secure erasure of information on storage media.

The authorisation concerns erasure of information up to the information security classification "secret/confidential" (*hemlig/confidential*).

To date, it is only Ibas's products that have succeeded in obtaining authorisation after careful evaluation by the Armed Forces. Overwriting of storage media is a way of ensuring that the information on the storage media can no longer be read.

The authorisation also applies to Ibas Degausser. The Degausser is a tool that is used to erase magnetic storage media with the aid of a magnetic field. The product can be used on all types of magnetic storage media such as magnetic tape, hard disks and diskettes.
